PROFILE

Business Information Technology graduate and IT development professional with hands-on experience developing and maintaining digital solutions that support business operations, as well as automating work processes. At LVI-Dahl, I have worked with e-commerce, product information management, system integrations and APIs, taking technical solutions from development through testing to deployment.

My experience includes API development and testing, troubleshooting system integrations, and using Power Platform solutions to automate processes. I have automated e-commerce publishing and campaign processes, developed the application used on customer-facing store terminals, and built Power Automate solutions to streamline internal processes.

My technical expertise includes APIs, Power Automate, Power Apps, JavaScript, Python, PIM and ERP systems, as well as web and software development technologies including HTML, CSS, XML and JSON. I have also independently developed my skills in AI solutions, with the goal of increasingly focusing my career on developing AI-powered solutions. New technologies and continuous learning are important parts of my professional growth.

WORK EXPERIENCE

LVI-Dahl Suomi Oy | IT Specialist / IT Development • 04/2024 – 09/2026

Worked in a broad range of IT development tasks involving e-commerce, product information management, system integrations, APIs and process automation. My responsibilities included maintaining and developing business-supporting systems, testing and deploying technical solutions, and automating manual workflows.

- Developed user interfaces for customer-facing store terminals and picking devices using Power Platform tools and participated in deployment and user training.
- Developed APIs for transferring and utilizing product information in the e-commerce platform, enabling clearer product information for customers and a smoother purchasing process.
- Automated e-commerce content publishing processes, reducing manual work and accelerating content updates in the online store and mobile application.
- Designed and implemented Power Automate solutions to automate internal forms, approval processes and information flows, reducing manual email traffic and improving information routing to the right people.
- Tested and documented integrations between the e-commerce platform, product information repository and ERP systems, and investigated data-transfer issues, improving issue identification, reporting and continuous system development.
- Ensured the quality, accuracy and timeliness of product information and product certificates in the product management environment and maintained data consistency across systems and digital channels.

LVI-Dahl Suomi Oy | Warehouse Worker • 04/2017–04/2024

Worked in daily warehouse and logistics operations, including order picking, order processing and transport documentation. Used a WMS warehouse management system and ensured orders and related documents were handled appropriately.

- Handled order picking and daily warehouse operations using a WMS warehouse management system.
- Processed and confirmed purchase orders and archived the related documentation.
- Prepared and processed waybills and ensured transport documentation was properly archived.
